Project Name	Important Data Using Transform Map from Spreadsheet
Maximum Marks	2 Marks

Problem solution:

project, "Import Data Using Transform Map Using Spreadsheet," focuses on importing employee information into ServiceNow.

The employee spreadsheet contains details such as Employee ID, Name, Email, Department, and Location. Instead of manually entering each employee record, the spreadsheet is uploaded through an Import Set. The data is temporarily stored in the Import Set Table and then processed using a Transform Map.

The Transform Map connects the spreadsheet fields with the corresponding ServiceNow table fields. Employee ID can be used to identify an existing employee. If the Employee ID already exists, the system updates the existing record. If it does not exist, the system creates a new employee record.

Purpose:

The purpose of this **Problem-Solution Fit Canvas** is to clearly identify the problems faced when importing employee data into ServiceNow and show how the proposed **Import Set and Transform Map solution** addresses those problems.

It helps connect the **customer needs, problems, existing solutions, user behaviour, root causes, proposed solution, and expected results** in one simple framework.

For this project, the main purpose is to show how employee data can be imported from an **Excel/CSV spreadsheet into ServiceNow** with less manual work, better field mapping, and fewer data-entry errors.

Problem-Solution Fit Canvas 2.0

Project: Import Data Using Transform Map Using Spreadsheet

Date: 30/09/2026

Jobs to be done and Customers	1. CUSTOMER SEGMENT(S) CS  ServiceNow administrators, developers, and organizations that need to import bulk data into ServiceNow.	6. CUSTOMER CONSTRAINTS CC  - Data must have the correct format. - Proper field mapping. - Required fields should be filled. - Valid values as per ServiceNow table.	5. AVAILABLE SOLUTIONS AS  - Manual data entry - Direct import - Import Sets - Transform Maps	Solutions / Alternatives
	2. JOBS-TO-BE-DONE / PROBLEMS JBP  Import spreadsheet data into ServiceNow quickly and correctly without entering records manually.	9. PROBLEM ROOT CAUSE RC  - Manual data entry is time-consuming and error-prone. - Direct import without mapping can lead to incorrect data.	7. BEHAVIOUR BE  - Prepare spreadsheet data in correct format. - Upload the file into ServiceNow (Import Set). - Map spreadsheet columns to target table fields using Transform Map. - Run the transform to import the data.	
3. TRIGGERS TR  Large amount of data needs to be added, updated, or migrated from Excel/CSV files.	10. YOUR SOLUTION SL  Use ServiceNow Import Set and Transform Map to upload spreadsheet data and automatically map spreadsheet columns to ServiceNow table fields, reducing manual work and errors.	8. CHANNELS OF BEHAVIOUR CH  - ServiceNow platform - Import Set - Transform Map - Excel/CSV spreadsheet	4. EMOTIONS BEFORE / AFTER EA  Before: Manual data entry is time-consuming and may cause errors. After: Users feel confident because data is imported quickly and accurately.	Emotions / Results
Project Flow  1. Spreadsheet (Excel/CSV) →  2. Upload Data (Import Set) →  3. Transform Map →  4. Field Mapping →  5. Transform →  6. ServiceNow Table (Imported Data)
